Upcoming Trade Shows for 2013

When? June 20th - 22nd
Where? Denver, Colorado
BOOTH #955

View the AIA Expo website »

Project Profile: INSUL-TARP®

Insul-Tarp is one of the premier under slab insulation materials on the market today. Because of the overall performance and workability of the product, it lends itself to several applications.

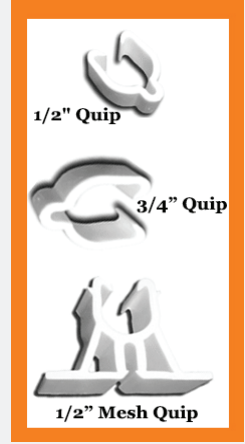

PROJECT INFORMATION

Where: Holiday City, Ohio
Roll Size Used: 6' x 50'
Number of Rolls Used: 120
Project: Menards Loading Dock

One of the largest big box stores made Insul-Tarp the insulation of choice for the main radiant heating supply lines in their new distribution center loading dock in northwest Ohio. Using Insul-Tarp creates a more efficient radiant system by keeping the main supply lines warmer. Pictured above, you can see the product being installed.

Flooding in the Midwest

Illinois River levels are still currently above average here in central Illinois. We recently had some major flooding in our area in April and May. The photo to the left was taken at East Port Marina (East Peoria, IL) the last week of April.

Severe storms caused the river to crest at 29.35 feet, marking a new 70-year record! The river levels flooded roads and buildings and caused damage to homes in the area. The Insulation Solutions corporate office in East Peoria had water nearly up to the building, but luckily no damage was done.

The floods also affected parts of Mississippi, Indiana, Missouri and Michigan. Peoria even made national news when CNN made a visit to cover a news story about the floods.

Here is a local home after the water reached its highest point. The homeowners protected their basement with the help of Viper VaporCheck vapor barrier and sandbags. To see more pictures from the flood, please visit our Facebook page.
